

Airfares fluctuate like the stock market

On a flight from **Chicago** to Paris, waiting just a few days could have saved you **\$300**

Your travel dollars go further with price drop protection

See what BCD Travel clients using price drop protection have saved so far

60,000
trips tracked

\$55
(or 8%) savings **realized** per reissued ticket

\$0.95
savings **realized** on every trip tracked

Why not take advantage of airfare fluctuations?

most realized savings occur in the first **24 hours** after ticketing

It's super simple

Turn opportunities into savings and doubt into confidence

With price drop protection there's

3%-8%

net savings on reissued tickets

No missed savings opportunities

No sharing your savings

No traveler intervention required

So, how does it work?
